

NOKIA SECURITY ADMINISTRATION: FOUNDATION (NSA-001) (NSA: FOUNDATION) – 2 DAYS

Overview

NSA: *Foundation* is a two-day instructor-led course, which introduces security administrators to Nokia IP Security Platforms.

The course provides the necessary information and hands-on experience to deploy, manage and maintain the Nokia family of IP security products. Lab exercises enable students to learn operational skills needed to effectively manage Nokia IP Security Platforms. NSA: Foundation replaces “NSA I”.

Pre-Requisites

- Persons attending this course must have a working knowledge of internetworking concepts and an understanding of TCP/IP, network addressing, and subnet masks.
- They should have knowledge of basic router concepts, static routes, and OSI layering. Check Point’s Security Administrator course is recommended as a companion course to NSA: Foundation.

Target Audience

- Technical persons tasked with the support, installation, deployment or administration of Nokia security products should attend this course. This could include the following:
 - System administrators
 - Security staff
 - Firewall administrators
 - Network engineers
 - Reseller support
 - Installation consultants

Course Objectives

- Understand Nokia IP Security Platform product and positioning
- Understand Nokia IP Series hardware and software architecture
- Exhibit competency installing and configuring the Nokia IP Series in a network environment
- Understand auditing, logging and authentication systems
- Manage the Nokia IP Series in a secure network environment
- Manage third party software installation, upgrades, and removals such as Check Point FW-1 NGX®

(Version 1.0. December 2009)
